### COURSE OVERVIEW

Develop an Effective & Practical IT Disaster Recovery Program (IT DRP) is a 2-day introductory course which will equip participants with essential knowledge and skills to plan out and introduce the IT Disaster Recovery Program (IT DRP) to the organisation. This is especially important with today's reliance on automation and IT systems. With so many threats that could compromise systems and data, this course will guide you on the many options and methods to safeguard your organization's data and IT system.

Designed in a highly interactive mode incorporating case studies and discussions, participants will be able to better understand the role of IT DRP within the organisation and also procedures the organisation should follow when implementing or activating an ITDRP in the event of a crisis.

### COURSE OBJECTIVES

At the end of this course, you will be able to :

- ✓ Gain a better understanding of IT DRP and the need to include it within the BCM programme
- ✓ Learn to speak the same language as the IT Managers for a smoother project delivery
- ✓ Understand the landscape of IT DRP as a discipline to better manage implementation and maintenance

### COURSE OUTLINE

- Understanding IT DRP and its role within the BCM programme
- Learn to identify the various threats and risks faced by the IT systems including the IT & Data Centre components
- Learn about the various IT DR strategies and trends and how to best select the appropriate strategies based on different scenarios
- Managing the IT DRP maintenance schedule

### COURSE AUDIENCE

Ideally suited to BCM Managers and team members in charge of rolling out the organisation's BCM programme. Enterprise Risk Managers and team members in charge of the organisation's Risk & Resilience programmes and those responsible for their organisation's IT system and network implementation, support and application development are also encouraged to join this course.
